SAFETY INSTRUCTIONS FOR THE "PUMP" CATEGORY

1. Introduction

This document outlines the safety guidelines and proper use of products in the **"Pump"** category. This includes items such as **water pumps, circulation pumps, submersible pumps, pump accessories, and control systems**. Following these guidelines ensures user safety and long-lasting, efficient operation of the equipment.

2. General Safety Guidelines

- Before use, read the product manual and device specifications carefully.
- Connect the pump only to an electrical installation that meets the manufacturer's requirements.
- **Do not use damaged cables, plugs, or other electrical components** – this poses a risk of electric shock or fire.

- Operate the pump in a dry, well-ventilated environment, avoiding contact with water when connecting the power supply.
 - Never use pumps in areas exposed to extreme temperatures or chemicals unless specifically designed for such use.
 - Keep pumps and accessories out of reach of children and pets.
-

3. Precautions During Use

- **Pump Installation** – Ensure the pump is securely mounted and properly connected to the water system.
 - **Electrical Safety** – Always disconnect the device from the power supply before performing maintenance, cleaning, or installation.
 - **Overheating Prevention** – Provide adequate cooling for the pump and monitor water levels in submersible systems.
 - **Avoid Dry Running** – Do not operate the pump without water to prevent damage.
 - **Cleaning and Maintenance** – Regularly clean filters and other pump components to ensure proper operation.
-

4. Maintenance and Storage

- Regularly inspect the technical condition of the pump, cables, and electrical connections.
 - Clean the pump according to the manufacturer's instructions, removing deposits and debris from working parts.
 - Store the pump in a dry place, protected from moisture and mechanical damage.
 - During winter, drain the pump to prevent damage caused by freezing.
-

5. Emergency Procedures

- **Pump Overheating** – Immediately switch off and disconnect the device from the power supply. Investigate the cause of the issue.
 - **Electrical Short Circuit** – Disconnect the pump from the power supply and contact qualified service personnel.
 - **Water Leaks** – Locate the source of the leak and repair or replace damaged components.
 - **Mechanical Damage** – Do not operate a damaged pump. Contact technical service for assistance.
-

Final Remarks

Following these guidelines ensures safe and effective use of pumps and accessories. Regularly monitor the technical condition of the device and adhere to the manufacturer's recommendations to achieve maximum performance and longevity.

Safety First!
