## Safety Instructions for the Use of Elastic Plant Training Net

### 1. Introduction

Elastic plant training net is a practical tool that supports controlled growth and proper shaping of plants. To ensure safe and effective use of the net, the following rules regarding installation, use and maintenance must be followed.

### 2. General safety rules

Use as intended - elastic net is only intended to support and shape plants during growth.

Avoid overloading - do not overload the net to avoid deformation or breakage.

Keep away from children and animals - the net is not a toy and improper use may lead to health hazards.

### 3. How to use

**Stable mounting** - make sure the net is properly mounted on the factory brackets in the grow tent.

**Stretching** - evenly stretch the net during installation to ensure stability and even support of the plants.

**Avoid mechanical damage** - do not use sharp tools near the net to prevent cutting or tearing.

**Distance from heat sources** – do not install the net near hot lamps or other heat-emitting devices that may damage it.

**Adjustment to plant growth** – regularly check the tension and position of the net to adjust it to the needs of the plants.

### 4. Maintenance and storage

**Cleaning** – at the end of the period of use, clean the net of plant debris using a mild detergent and lukewarm water.

**Drying** – ensure that the net is completely dry before storage to prevent the growth of mold or other microorganisms.

**Storage** – store the net in a dry and shaded place, away from sources of heat and direct sunlight.

#### **5. Final remarks**

Failure to follow the above rules may lead to damage to the product, a safety hazard or reduced efficiency of the net. If you have any questions regarding installation or use, contact the manufacturer or distributor.
